HUFFMAN PSYCHOLOGY

Dr. Jennifer Huffman is a board certified clinical neuropsychologist providing psychological and neuropsychological services in the Mid-Michigan area. These services include testing/evaluations for a wide variety of presenting problems, consultation, and therapy.

➤ NEUROPSYCHOLOGICAL EVALUATION:

Neuropsychology is the study of brain/behavior relationships. Dr. Huffman conducts neuropsychological evaluations for a variety of presenting problems that affect learning and cognition to determine changes in memory functioning, attention and concentration, problem solving, and emotional status. These functional areas are often influenced by medical and psychological conditions, and neuropsychological testing can clarify diagnoses and assist in treatment planning. Conditions that affect learning and cognition include:

- *Learning Disorders*
- *Attention-Deficit/Hyperactivity Disorder (ADHD)*
- *Pervasive Developmental Disorders*
- *Depression/Anxiety*
- *Head Injury*
- *Memory Impairment/Dementia*

Age Ranges and Length of Testing

Dr. Huffman performs evaluations on individuals across the full life span. Usually, testing is completed in one day across morning and afternoon sessions with breaks

as needed to ensure maximum performance. At times, it is appropriate to arrange the testing in multiple brief sessions.

Areas Assessed

A typical neuropsychological evaluation will involve assessment of the following:

- *General Intellect*
- *Higher Level Executive Skills (e.g., sequencing, reasoning, problem-solving)*
- *Attention and Concentration*
- *Learning and Memory*
- *Language*
- *Visual-Spatial Skills (e.g., perception)*
- *Motor and Sensory Skills*
- *Mood and Personality*
- *Behavioral Functioning*

The specific tests and procedures used are closely tailored to the individual client, considering the client's stage of development and the complexity of the problems.

Test Interpretation

Test scores are compared to scores of large groups of healthy people to understand a client's pattern of strengths and weaknesses.

Written Reports and Recommendations

After the evaluation is completed, Dr. Huffman will meet with the client (and often with family) to review the findings of the evaluation. At that time recommendations are made for treatment or other interventions, ranging from teaching clients how to best capitalize on the strengths in their learning style, to referral to

an appropriate professional in the client's community for continued treatment of their condition.

After discussing the results, a written report can be made available to communicate the findings to other professionals involved in the case.

➤ EDUCATIONAL CONSULTATION:

Dr. Huffman performs evaluations designed to help in decision making regarding appropriate school placement or interventions needed to maximize success in learning. She is available to attend school meetings and provide consultation to schools.

➤ PROFESSIONAL CONSULTATION:

Dr. Huffman assists in litigation involving individuals with psychological or neuropsychological conditions. She provides independent medical evaluations and/or expert witness testimony.

➤ PSYCHOLOGICAL TREATMENT:

As a therapist, Dr. Huffman offers a variety of treatment modalities for a broad array of conditions and concerns. These include:

- *Academic Problems*
- *Oppositional-Defiant Behavior*
- *Depression/Anxiety*
- *Adjustment Difficulties*
- *Other Psychological Conditions*
